

DBIC response to district advisory committees

In general, the DBIC accepts and supports the work and reports of the various district advisory committees. Furthermore, the DBIC recommends consideration for the following actions to better support the district student performance goals:

School Health Advisory Council

- Specify student performance targets and the status of each proposed recommendation
- Specify budget impact of proposed recommendations
- Provide implantation status of each recommendation
- Separate nutrition, nutrition education, physical activity, and school based programs to better track progress in each area

Special Academic Programs

- Continue dyslexia goals as written
- Explore science/technology gifted initiatives at the high school level as well
- Multilingual education should add recommendations as a result of the dual system (NCLB – TAKS – LAT)
- Concerns about the existence of a PASP program
- More information is needed on the strategic planning process in Special Education

Library / Information Services

- Continue work with curriculum to integrate library and information literacy skills into the curriculum at all levels

Diversity Advocacy

- Support the 3 year phase-in of the new 18% minority employment goal (as proposed by PISD Human Resources Department)

Draft March 11, 2007
