

The new Plano academy high school will be a non-traditional, school of choice high school comprised of approximately 600 students grades 9 – 12. Even though not technically part of the New Tech Network, the school will embrace similar tenets of project/problem based learning and technology integration. In addition, the structure will focus on STEAM (science, technology, engineering, arts, and mathematics) and course and content integration.

In concert with district staff, the principal will define many aspects of the campus operational structure.
